

# OIL AND GAS OPTIONS IN A SELF-DIRECTED IRA

Self-directed plans allow investors the freedom to choose many alternative investments (besides the traditional stock or mutual fund) to build tax-sheltered retirement income. Oil and gas options are one example of alternative assets investors acquire in this manner to add diversity to their retirement portfolios.

## How can you invest oil and gas assets with your self-directed IRA?

- Invest in land being explored for these options
- Invest in mineral rights of land being explored
- Purchase interests in oil and gas refineries and/or drilling companies
- Acquire commodities and/or futures contracts

## Before you invest:

- Research the investment options thoroughly to avoid fraud
- Understand the benefits and risks of these assets
- Consult with financial, accounting, and industry professionals when making decisions

## OTHER ENERGY INVESTMENTS ALLOWED IN SELF-DIRECTED IRAS:

- Wind and solar options
- Hydroelectric energy, hydropower, and wave power
- Natural gas and coal
- Geothermal energy
- Biofuel

## Benefits of Investing with Midland IRA:

- All new IRA accounts are opened and funding paperwork is submitted the day we receive the request.
- We process all transactions within 24 hours of a funded account, putting your IRA funds to work ASAP!
- We charge a flat annual administration fee, unlike some competitors who charge solely based on the total account value.
- Our team has superior knowledge and experience with oil and gas IRAs, with over 30 years in the business.
- We offer weekly educational courses and events designed to connect you with like-minded investors and to increase your knowledge of alternative investments and ways your self-directed plans can be used to earn retirement income.
